LIST OF DATA TABLES

Data Table 5.38. Continuous ventilation with automated performance monitoring.................................................................236
Data Table 5.39. Emergency ventilation initiated by safety controls, alarms, and interlocks (SCAI) ...........................................238
Data Table 5.40. Mechanically activated emergency shutdown/isolation device .................................................................240
Data Table 5.41. Mechanical overspeed trip on a turbine ..................................................242
Data Table 5.42. Automatic fire suppression system (within process equipment).................................................................244
Data Table 5.43. Automatic fire suppression system for local application ......246
Data Table 5.44. Automatic fire suppression system for a room ......................248
Data Table 5.45. Automatic explosion suppression system for process equipment ........................................................................250
Data Table 5.46. Human response to an abnormal condition ...................................256
Data Table 5.47. Human response to an abnormal condition with multiple indicators and/or sensors, and the operator has > 24 hours to accomplish the required response action ........................................258
Data Table 5.48. Adjustable movement-limiting device ...........................................260
Data Table 5.49. Personal protective equipment (PPE).................................................262
